TEAM BRIEF · EDUVOS CHALLENGE ENTRY

CAMPUSCART

Your campus, open for business.

A quick guide to what CampusCart is, what it does, and how close it is to launch.

FOR
The CampusCart team

BY
Lama Nkuna

AS OF
21 October 2026

01 WHAT IT IS

CampusCart is an online marketplace for Eduvos students. Students buy, sell and swap textbooks, tech, food, services and more with other students on their own campus.

Think of it as a **safer, campus-only Facebook Marketplace**, run with the Eduvos Incubation Hub.

Why students would use it instead of WhatsApp groups

Checked sellers

The Incubation Hub approves every shop before it can sell. Trusted shops get a "Verified" badge.

Safe meet-ups

Buyers and sellers meet at approved spots on campus. You see the item before you pay.

Private chat

Messages stay inside the app, so nobody has to share a phone number. The app also warns people about common scams.

Who uses it

Students buying

Find things on their campus, save favourites, message sellers, and post what they're looking for.

Student sellers

Open a shop, list items with photos, reply to buyers, and see how their shop is doing.

Hub mentors

Support the shops they look after, run office hours, and post tips and events.

Hub admins

Approve shops, deal with reports, choose featured shops, and keep the marketplace safe.

02 WHAT YOU CAN DO

Shop

- Browse every campus, or just your own
- Search, and filter by category and price, including free items and swaps
- See photos, prices and where to collect each item
- Save items and follow favourite shops
- Get an alert when something you're searching for is listed

Sell

- Set up a shop in 5 simple steps, then the Hub approves it
- List items with up to 6 photos
- Mark items as sold, pause them, or relist them
- See enquiries, sales and a trust badge that grows over time
- Free to sell, and CampusCart takes no cut

Ask and offer ("Looking For")

- Post what you need, like "graphing calculator, under R300"
- Shops reply with offers
- Requests don't show your name
- Old requests close by themselves

The Incubation Hub

- Events, office hours and selling tips in one place
- RSVP to events, or book time with a mentor
- See which shops the Hub has verified

Talk and stay safe

- Message sellers and offer swaps
- Confirm a sale once it's done
- Report anything that looks wrong
- Get notifications for messages, offers and alerts

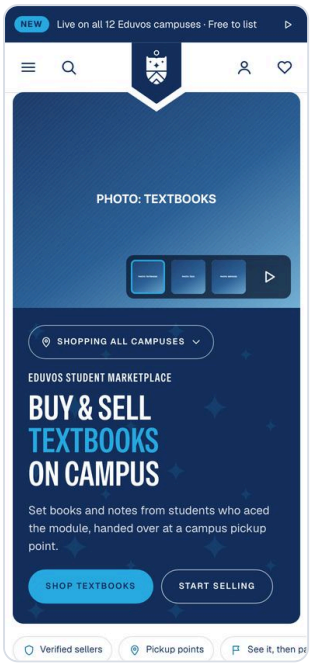

Your account and privacy

- Sign in with your student email and a one-time code (no password)
- Download everything the app holds about you
- Delete your account in one step
- Built to follow POPIA, South Africa's privacy law

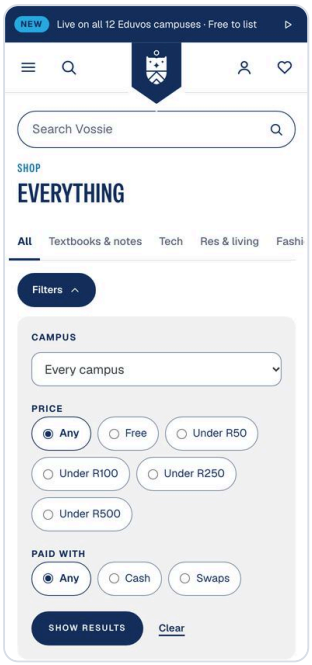

Built for students' phones

- Fast on cheap phones and mobile data, with a data-saver mode.
- Can be added to the phone's home screen like an app.
- Built to meet international accessibility standards.

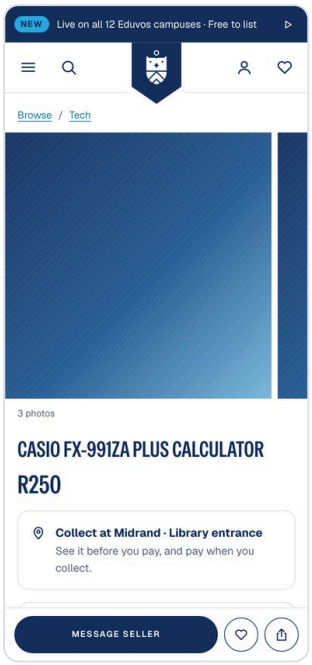

03 A LOOK AT THE APP

Looking For

Incubation Hub

Messaging a seller

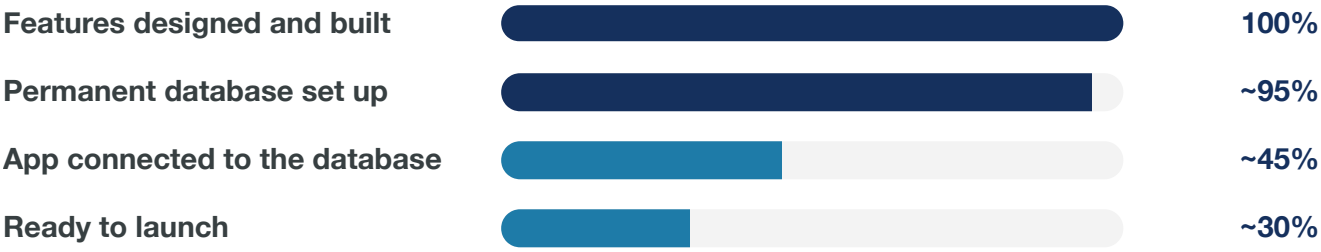

Seller dashboard

The screenshots were taken during the build, so they still show the working name, Vossie. The photos are placeholders.

04 WHERE WE ARE

Every feature is built and tested. The app works today with sample data. What's left is connecting it to its permanent database and switching it on for real students.

The percentages are estimates from the build plans.

Done

- All shopping, selling, messaging and community features
- The Hub's tools for mentors and admins
- Privacy, safety and accessibility
- Sign-in on the permanent database
- A working preview for the team

In progress

- Moving selling, photos and messaging onto the permanent database

Next

- Moving community features and Hub tools across
- Sign-in codes sent by email
- Final testing on real phones
- Going live

In numbers

13
Eduvos campuses covered

60+
screens built

2,700+
automatic checks that run on every change

10
shopping categories

05 THE ROAD TO LAUNCH

1. **Finish connecting the database.** Selling, messaging, community features and Hub tools move onto the permanent database, so nothing is lost when the server restarts.
2. **Turn on email.** Students receive their sign-in code by email instead of seeing it on screen.
3. **Test on real phones.** Check the app on a cheap Android phone and on an iPhone.
4. **Add real content.** Real photos, real Hub events, and enough shops listed so the app doesn't open empty.
5. **Go live.** Open CampusCart to students, possibly starting with one campus as a pilot.

Decisions the team can help with

- Launch on all campuses at once, or start with a pilot campus?
- Should new messages and alerts also be sent by email, or stay in the app?
- How long should messages and reports be kept?

Try it

The team preview runs at **vossie-pi.vercel.app**. That's the working name, and the address changes later. On the sign-in page, pick a sample account to look around as a student, a seller, a mentor or an admin. You don't need a code. Anything you add is cleared when the preview restarts.
